write a function to check wheather two string anagram or not

In [2]:
```python
def anagram(str1,str2):
    if(sorted(str1) == sorted(str2)):
        print("\tString are anagram")
    else:
        print("\tString are not anagram")
str1 = input("\t First String: ")
str2 = input("\tSecond String: ")
anagram(str1,str2)
```

```
        First String: bat
        Second String: tab
        String are anagram
```
