Write a program to print all prime numbers less then 100

```python
In [1]:  start = 1
         end = 100

         for val in range(start, end + 1):
             if val > 1:
                 for n in range(2, val//2 + 2):
                     if (val % n) == 0:
                         break
                     else:
                         if n == val//2 + 1:
                             print(val)
```

```
